

Bilingual English/Spanish Biology Glossary of Terms

This publication is a compilation of the individual glossaries of terms found at the end of the 10 units that comprise the two-semester Biology course developed by the National PASS Center (NPC). For those students whose primary language is Spanish, this glossary may help them in gaining a clearer understanding of the specialized vocabulary associated with the study of biology. It may be used in conjunction with the NPC PASS (Portable Assisted Study Sequence) course, or as a supplemental resource for any student who might benefit. It is available for free download in the Publications section of this site.
